

PowerCube AC WhisperPower inverter 24 / 7000

Réf : **WP60203004**

The high-power Powercube AC inverter is designed for continuous operation even under the most extreme conditions. It provides a 230 V power supply from the batteries or the shore supply, and optimises the use of the onboard generator.

CARACTERISTICS

POWERCUBE AC WHISPERPOWER INVERTER 24 / 7000

Réf. **WP60203004**

Dangerous material : non
Weight : 9,44 kg.
Catalog page : 267

- Model : AC PowerCube 24 / 7000
- Weight : 18 kg
- Depth : 193 mm
- Power : 6000 W
- Max. power : 7500 W
- Height : 575 mm
- Width : 334 mm

SPECIFICATION

The PowerCube AC inverter is an electronic power device that converts direct current (DC) into alternating current (AC). This inverter makes it possible to switch off the diesel generator for longer periods of time and provide the entire onboard installation with power including, for example, air conditioning, kitchen and refrigeration equipment. As a result, there is less fuel consumption, less noise disruption and fewer running hours for the generator.

Perfect for insertion in a complete WhisperPower system.

- Compact and robust
- Front-mounted control panel
- Industrial electronics based on high frequency switched mode technology
- As a result, high efficiency (>92%) and a minimum of powerloss
- Quiet operation and environmentally friendly
- Significant cost savings from reduced fuel consumption
- Great high efficiency = minimal cooling required (cool running)
- Fan cooled, resistant to high ambient temperatures
- No ripple effect from AC to battery, with as a result, a stable DC network
- Perfect to combine with DC PowerCube and Genverter
