SPECIFICATION

Ideal for managing relays or other loads on board your boat. The control is perfectly waterproof, allowing easy activation at the touch of a foot. With a maximum load capacity of 4 A, it meets the varied needs of your marine electrical system.

The stainless steel base ensures exceptional durability, resisting the corrosive elements of the marine environment. The control knob is made from seawater-resistant silicone rubber, ensuring reliable handling even in harsh marine conditions.

To prevent accidental activation, the switch is fitted with a hinged thermoplastic flap cover. This clever design adds an extra layer of protection, ensuring safe and reliable operation. Available in grey, white or stainless steel colour options, this switch blends in harmoniously with the aesthetics of your boat.
