Réf. **ROTOF4**

Dangerous material : non
Weight :
Catalog page : 78

- Length : 405
- Width : 65 mm
- Hub diameter : 354 mm

SPECIFICATION

This system prevents ropes, lines and plastic bags from blocking your propeller.

- It is regularly fitted to SNSM boats, many fishing boats and certain administrations (and of course, pleasure boats)
- This ingenious device consists of two rotating blades mounted on the propeller shaft and a third held by a fork mounted on the seat or stern
- The rotating movement of the propeller brings the seaweed or ornaments directly between the blades, which cut them instantly before they roll up in the propeller blades
- The unit is made of stainless steel
- Works equally well in forward and reverse
- Fits shafts from 20 to 200 mm
