Réf. **1237**

Dangerous material : oui
Weight :

- Diameter : 32 mm
- Length : 287 mm
- Weight : 260 g
- Color : Orange
- Ignition : Manual

SPECIFICATION

The parachute flare is an essential tool in night-time search and rescue operations.

This flare propels an illuminating white light attached to a parachute up to an altitude of 300 meters. Its design is resistant to extreme environmental conditions, and its ability to operate reliably after immersion in water makes it a reliable and easy-to-handle tool, thanks to its improved pull-wire igniter.
