SPECIFICATION

This black square-head screw shackle is ideal for lifting and handling applications, offering strength and safety in demanding environments such as the marine and construction industries. Available in sizes ranging from 6 to 45 mm, it adapts to a wide range of workloads while facilitating handling thanks to its optimised weight and compact shape.

Made from high-strength steel, this shackle guarantees durability and performance, even under heavy loads. The square-head screw ensures fast, secure assembly, while the black finish offers added protection against corrosion.

How to use: For correct assembly, always attach the hook to the bolt and the sling or cable to the shackle eye. To ensure safe lifting, never exceed the working load limit (SWL) specified for each shackle size.
