SPECIFICATION

Grammer's rotating consoles for Avento Pro Air, Pro M, and Pro S seats are robust, high-quality solutions for improving operator mobility and comfort in demanding environments such as ships and commercial vehicles. These consoles are designed to fit directly between the seat and the suspension, making them easy to use.

They offer two rotation options: 180° rotation with 20° stops in both directions, or full 360° rotation for maximum flexibility. In addition, a locking mechanism allows the console to be fixed in any position to suit the operator's needs.

Please consult the technical document to check the dimensions and mounting points compatible with your vessel. It is possible to adapt the mounting to your specific requirements, for example by drilling additional points or developing custom brackets.
