- Material : stainless steel

SPECIFICATION

Avento ultra-low profile pilot seat track, just 26 mm high and 450 mm wide. The track features linear guides with brush covers and a stainless steel frame for exceptional durability. The seat support locks automatically every 40 mm using a spring-loaded pedal accessible from both sides. The top plate has an anti-slip surface for added safety, and can be customised as required.

Designed for recessed or bridge installations, Twintrack F also offers the option of a stainless steel bulkhead frame inclined at 45° for bridge mounting. Please note: to ensure optimum sliding, the system must be mounted on a flat surface.

Standard length up to 2500 mm; other lengths available on request.
