SPECIFICATION

The UCMD control panel is a key element of Ultraflex's Master Drive power steering system for outboard motors. Designed for precise and safe control, it incorporates a safety ON/OFF switch (Smart Button) and three patented power levels with indicator lights, allowing the system's response to be adapted to each boating situation.

For optimum performance monitoring, this panel is equipped with a visual engine temperature indicator, preventing overheating and ensuring worry-free sailing. Its illuminated standby position panel enhances legibility, while the dual-engine key selection enables efficient management of twin-engine configurations.

Installation is simplified thanks to its plug-in cable harness, and for added flexibility, a 7-metre extension cable (ref. 42636L) is available.

Compatible with Ultraflex Master Drive, the UCMD control panel is the ideal solution for optimising the performance and safety of your power steering system, while guaranteeing intuitive and scalable operation.
