Régulateur de charge PWM NC 30A

Réf : **CA11112**

Available in 10A, 20A and 30A, this PWM solar regulator with LCD screen ensures stable, safe charging of 12V/24V batteries. It automatically adjusts voltage, protects against overcharging and includes USB ports (10A and 20A models) for small appliances. Ideal for camping, boating and isolated sites.

CARACTERISTICS

RÉGULATEUR DE CHARGE PWM NC 30A
Réf. **CA11112**

Dangerous material : non
Weight : 0,53 kg.

- Charge current : 30A
- Length : 196 mm
- Weight : 0.4 kg
- Max. power : 375-750 W
- Height : 54 mm
- Width : 111 mm

SPECIFICATION

Optimise the management of your solar system with this PWM regulator available in 10A, 20A and 30A. Its LCD screen displays your battery's state of charge and voltage (12V/24V) in real time. PWM (Pulse Width Modulation) technology ensures efficient voltage regulation, guaranteeing a stable charge without any increase in current. An integrated temperature sensor automatically adjusts the charge point according to temperature variations.

The 10A and 20A models have built-in USB ports, making them ideal for charging small devices such as mobile phones and tablets. All models feature advanced protection against overvoltage, short-circuits and excessive load connections for optimum safety. The system automatically switches off when the battery reaches a critical level and reconnects once the charge is restored.

Available models:

- 10A: Ideal for small solar installations (lighting, small appliances).
- 20A: Suitable for intermediate needs (motor homes, boats, isolated sites).
- 30A: Perfect for more powerful solar systems requiring a higher load.

Applications: Ideal for boats, motorhomes, stand-alone solar installations and isolated sites, offering efficient and secure solar energy management.
