Double carbon brush holder (without carbon)

Réf : **95002**

Hollex propeller shaft grounding system

Classic delivery

Public price TTC
242.56 €

CARACTERISTICS

DOUBLE CARBON BRUSH HOLDER (WITHOUT CARBON)

Réf. **95002**

Dangerous material : non
Weight : 0,11 kg.
Catalog page : 76

SPECIFICATION

- Stops the effect of electrolysis on the shaft line
- Eliminates interference to the radio system and other electronic equipment

Important: To ensure performance, the carbon must slide on a copper ring attached to the coupling. The carbon and ring must be kept clean and free from dust and grease. Another option is to use the Hollex directly on the shaft or coupling. The carbon must then be replaced with a copper part. It is essential to maintain the traditional anodic protection for overall protection of the shell and installation.
