- Autonomy : 48 h
- Release mechanism : Manual
- Type of tags : EPIRB Class II

SPECIFICATION

The **Ocean Signal EPIRB3** is a next-generation emergency position-indicating radio beacon (EPIRB) designed to enhance crew safety and improve search and rescue efficiency.

Featuring **Cospas-Sarsat 406 MHz distress signaling** combined with an integrated **AIS transmitter**, it ensures that both rescue coordination centers and nearby vessels receive accurate location data for faster response times. Its **Return Link Service (RLS)** provides confirmation that your distress message has been received, offering reassurance during emergencies.

Equipped with a **multi-constellation GNSS receiver (GPS, Galileo, Glonass)**, the EPIRB3 guarantees precise positioning in all conditions. Its **NFC connectivity** allows simple status monitoring and battery checks through the free Ocean Signal mobile app.

Compact (**17 x 9 x 7 cm**), lightweight (**190 g**) and floating, the EPIRB3 is easy to deploy and transport. The lithium Li/FeS2 battery offers a **10-year replacement cycle** and more than **48 hours of operational autonomy**, even in extreme temperatures.

Key Features:

- 406 MHz beacon with AIS transmission for local alerting
- Return Link Service (RLS) for distress message confirmation
- Multi-GNSS support: GPS | Galileo | Glonass
- NFC connectivity with free mobile app for easy checks

- Compact, lightweight, floating, and waterproof (10 m / 5 min)
- Long-life lithium battery: 10 years / 48+ hours operation
- Manual deployment (Category II) with bracket included

The **Ocean Signal EPIRB3** is the perfect choice for commercial operators, professional mariners, and demanding sailors who require a compact, connected, and highly reliable safety solution at sea.
