Weight : 30,00 kg.
Catalog page : 431

SPECIFICATION

The **Jason’s Cradle® Rescue Stretcher** is designed for the safe and efficient horizontal recovery of casualties, divers, or bodies from the water. The horizontal position stabilises blood pressure, helping to prevent the potentially fatal effects of Circum Rescue Collapse during extraction.

Built to withstand the toughest conditions, it features Delrin 100T high tensile plastic rungs, marine-grade 316 stainless steel components, and polyethylene caps. Fitted with certified 1-tonne WLL lifting strops and flotation tubes, the stretcher has been tensile tested beyond 1,000 kg and carries full SOLAS certification.

Trusted worldwide by naval forces, offshore operators, and professional diving teams, the **Jason’s Cradle® Recovery Stretcher** is proven to provide safe, reliable, and rapid recovery in emergency situations.

Technical Specifications:

- Horizontal recovery position for casualty safety
- Two standard sizes: 1,580 mm (JCSTR009) or 1,940 mm (JCSTR011)
- Marine grade 316 stainless steel components and fasteners
- Integrated flotation tubes

- WLL lifting strops rated at 1 tonne
- SOLAS certified

Main uses: casualty recovery, body recovery, diver support.
