SPECIFICATION

This 12V flush-mount socket is designed to meet the requirements of electrical installations on pleasure boats and professional vessels. It allows you to directly charge your electronic devices – smartphones, tablets, laptops – from the onboard 12V network, without the need for a converter or specific charger.

Equipped with two USB ports – USB-A (QC 3.0) and USB-C (PD) – it automatically adjusts the output voltage (from 5V to 20V) according to the connected device, ensuring fast, safe, and efficient charging up to 45W.

Its built-in switch allows you to cut off the front power supply, preventing any unnecessary consumption when the socket is not in use. Easy to install via flush mounting (ø 27 mm), it connects through 6.3 mm Faston flat terminals. Front waterproofing is ensured thanks to the supplied cap.

Compatible with the DC range of mounting supports, this socket integrates seamlessly into modular switch panels for boats, allowing for a clean, reliable, and cost-effective installation.

Specifications:

- Input voltage: 12V DC
- Output voltage: 5V to 20V (USB PD)
- Max power: 45W

- Outputs: USB-A QC 3.0 + USB-C PD
- Switch: Built-in On/Off
- Flush mount: Ø 27 mm, depth 47 mm
- Connection: 6.3 mm Faston flat terminals
- Fixing: Plastic locknut
- Waterproofing: Front panel with supplied cap
