CARACTERISTICS

FLEX-O-FOLD PROPELLER ANODE Ø 70 MM - PACKED

Réf. **P208910**

Dangerous material : non
Weight :
Catalog page : 138

- Units in box : Packaged
- Diameter : 69 mm
- External diameter : 70 mm
- Hole CTC distance : 50 mm
- Height : 37 mm

SPECIFICATION

The anodes sacrifice themselves for the benefit of the protected metals.

They must be cleaned and replaced regularly.

Warning, When they are worn beyond 60%, they no longer retain their protective capacity.

For seawater, use either a zinc alloy or an aluminium alloy anode.

At equal intensity, an aluminium anode weighs three times less than a zinc anode, has a higher electronegative potential and pollutes less.

Ideal for protecting aluminium hulls.

For sailing exclusively in freshwater, a magnesium anode should be preferred
