CARACTERISTICS

QUICK THRUSTER BTQ300 ANODE - PACKED

Réf. **P208918**

Dangerous material : non
Weight :
Catalog page : 138

- Units in box : Packaged
- Diameter : 70 mm
- External diameter : 70 mm
- Model : BTQ300
- Weight : 0.54 kg
- Height : 49 mm

SPECIFICATION

Anodes play an essential role, sacrificing their own material to protect metals from corrosion.

Regular maintenance is crucial, as once they are over 60% worn, they lose their effectiveness.

For seawater, zinc or aluminum alloy anodes are recommended.

For the same current, an aluminum anode weighs three times less than a zinc anode, has a higher electronegative potential and pollutes less.

They are particularly suitable for protecting aluminum hulls.

For use in freshwater, magnesium anodes are preferable.
