SPECIFICATION

The Borth helmet is a lightweight professional helmet designed for situations where protection, comfort and discretion are essential. It combines CE-compliant safety, robustness and adaptability, while being sufficiently understated for use outside of sports.

- Main technical features:
- Robust ABS outer shell, resistant to impact, splashes and abrasion.
- Available in black and red.
- Moulded EVA foam interior for impact absorption and comfort; removable EVA ear pads for adaptability depending on noise level or side exposure.
- Adjustable nylon chin strap with quick-release buckle for quick donning and doffing, while maintaining a secure fit.
- Rear dial adjustment allows for precise adjustment to head size, quick adaptation for any user.
- Full ventilation: strategic vents to ensure air circulation, reduce heat and humidity — important during prolonged use or in difficult conditions.

Why this helmet for interventions

Its light weight combined with the ABS shell makes it comfortable to wear, reducing fatigue during prolonged operations.
Removable components (ear pads, lining) facilitate maintenance and adaptation as needed (silence, comfort, etc.).
