CARACTERISTICS

ELECTROSCAN - BLACK WATER TREATMENT 24 V

Réf. **SCAN24**

Dangerous material : non
Weight : 10,40 kg.

- Consumption : 20 A

SPECIFICATION

The Electro Scan is an electrical wastewater treatment system (USCG approved for boats up to 19.70 metres) that transforms seawater into a powerful bactericide (decomposition of salt into sodium and chlorine). It allows purified waste to be discharged into the sea in authorised areas. Crushing, turbulence, biochemical degradation and discharge of purified wastewater. Electro Scan is suitable for most marine toilets* and can be used with one or even two toilets. Electro Scan operates on 12, 24 or 32 volts. The system comprises a control module, LCD screen, system status indicator panel and treatment tank. An optional salt tank must be installed for use in fresh or brackish water.

- Corrosion-resistant connections. Easy to install. Remote control panel supplied.
- LCD screen provides all necessary system information.
- Capacity: 5 to 6 flushes
- Weight (Kg) : 9
