SPECIFICATION

The activated carbon filter cartridge used in the desalinated water filtration stage effectively eliminates impurities as well as the smell and taste of chlorine present in the water. This replacement cartridge guarantees high quality water, fit for daily consumption and free of chlorine odour and taste. It is specifically designed for use with Aqua-Base XA/XD, YC/YK watermakers and the automatic rinse of ES series models. The in-line activated carbon filtration process ensures natural purification of fresh water, without the use of chemicals.
