SPECIFICATION

The 6505 electronic control head has been specially designed to meet the needs of customers with limited control panel space. Despite its compact design, the 6505 can control two motors and offers all the functionality and precision of our larger models.

The housing and handles are made of bronze and stainless steel respectively, and are available in long or short versions. The standard unit is available in chrome, black epoxy or polished bronze finish, with optional self-adhesive side rockers.

This control head incorporates the very latest technological advances, including waterproof buttons for Station Accept, Station Lock, Throttle Override and Engine Synchronizer functions. It is completely waterproof from the top, making it suitable for use anywhere on board the vessel. However, it is advisable to protect the lower part from environmental elements.
