SPECIFICATION

Designed for pleasure craft, the 6504 model box combines precision and reliability. Made entirely of bronze and stainless steel. Compatible with all Kobelt 6525 system control products, it can integrate additional functions such as steering, thruster control and many other on-board functions, providing a complete solution for boat owners. The standard 6525 microprocessor accepts signals from this control head to manage timed locks, as well as 4-20 mA, PWM or other signals for electronic motors.
