SPECIFICATION

Sika® Aktivator-100 is a solvent-based, colourless adhesion promoter that reacts with moisture to deposit active groups on substrates. These groups create a strong bond between substrates and primers, sealants or adhesives. Developed to prepare surfaces prior to the application of Sika adhesives and flexible sealants, it improves adhesion on a wide variety of non-porous substrates. Easy to use and with a fast evaporation time, Sika® Aktivator-100 ensures fast and efficient preparation of bonding surfaces.
