SPECIFICATION

This modular chair system has been specially designed for optimal customer component integration in a way that ensures long-term operation and easy servicing. The Active chair series has a fully gas-spring actuated ergonomic system with six adjustment features, ensuring optimal working positions for the user.

The modular design provides optimal customer component integration in a way that ensures long-term operation and easy servicing. Spacious M-armrests with room for internal cabling make it easy to install most equipment and accessories. Norsap 1800 Active is a cost-efficient chair, offering a vast range of ergonomic adjustments, and complies with the strict ergonomic requirements found in the NORSOK regulations. Our chairs are designed to comfortably fit 90% of all users according to the ISO7250 Standard.

The flanged oval column or the XL column has a large footprint with four mounting holes for secure fastening to the deck. This is designed to be integrated with the Active or Impulse deck rail that can be delivered as a flush or top-mounted deck rail.
Standard adjustments are front and back tilt, forearm and upper arm adjustment, rotation, gas-dampened height adjustment, flip-up armrests and electrical or fold-up footrest. Other available options are seat-mounted footrest, seat belts, lumbar support, logo embroidered front and foil logo on the backrest. The chair comes in black leather as standard.
